RUBRIC: Virtual Machine Setup (Ubuntu Desktop)

Activity: Create, Configure, and Install Ubuntu Desktop on a Virtual Machine

Total Points: 100

Criteria	Excellent (100%)	Proficient (75%)	Developing (50%)	Incomplete (0%)	Score
VM Type & Version (10 pts)	Correctly selects Ubuntu (64-bit) as the OS type and version. Matches the downloaded ISO architecture.	Selects correct type but wrong version (e.g., 32-bit instead of 64-bit) — VM still works.	Selects wrong OS type entirely (e.g., "Other Linux") — needs correction.	Fails to select any valid OS type; cannot proceed.	/10
Memory (RAM) Allocation (15 pts)	Allocates 4-8GB RAM as required. Understands the host system limitation.	Allocates 3GB — 3.5GB (sufficient but slightly below requirement).	Allocates 2GB or less — causes severe lag or installation failure.	Allocates no RAM or invalid value.	/15
Processor (CPU) Allocation (15 pts)	Allocates 4 CPU cores with 100% execution cap. Enables PAE/NX if available.	Allocates 2 cores but does not adjust execution cap or nested VT x settings.	Allocates only 1 core — installation takes extremely long.	Fails to configure processor settings.	/15

Hard Drive (Storage) Setup (20 pts)	Allocates 100 GB dynamically allocated storage (or fixed). Created a partitioning in drive.	Allocates 25GB but chooses wrong disk format (e.g., VHD) — still functional.	Allocates less than 20GB — insufficient for installation.	No hard drive created; VM cannot boot.	/20
ISO Attachment & Boot Order (15 pts)	Correctly attaches the Ubuntu Desktop ISO to the optical drive. Sets boot	Attaches ISO but forgets to adjust boot order — manually boots	Attaches ISO but boot order wrong — VM boots to blank screen.	Fails to attach ISO; VM cannot install.	/15

	order: Optical → Hard Disk .	via "Force BIOS" first time.			
Proper Installation Execution (25 pts)	Completes full installation: partitioning ("Erase disk"), user setup, timezone, keyboard. No errors. Reboots successfully into GUI.	Completes installation but makes minor errors (e.g., wrong timezone — fixes later).	Installation starts but fails midway (partitioning error, corrupt ISO, or power loss).	Installation not attempted or aborted.	/25

TOTAL SCORE: ____ / 100

DOCUMENTATION REQUIREMENT

Student Name: _Gonez, Josh Vincent P.

Date: Aug 26, 2026

VM Name: vmnigonez1

1. VM Specifications Summary

Component Allocated Value

VM Type / OS Ubuntu (64-bit)

RAM **7.85GB (7850 MB)** CPU Cores **4**

Hard Drive Size **100 GB** (Dynamic / Fixed) Storage

Controller SATA / SCSI

Network Adapter NAT / Bridged

ISO File Used **ubuntu-26.04-desktop-amd64.iso**

2. Step-by-Step Setup Process

(Describe what you did, in order. Include commands used, if any.) 1. **Create New Virtual Machine**

2. **Input name and select ISO image**

3. **Username and Password creation**

4. **Hardware storage setup**

5. **Checking of initial summary**

3. Issues Encountered & Resolutions

(List any problems during setup and how you fixed them.)

Issue	Solution
Corrupted ISO file	Reinstall ISO file

4. Verification Screenshots

(Paste screenshots here or attach separately)

- VM Settings (Memory, CPU, Storage)
- ISO Attached / Boot Order
- Installation Progress
- Final Desktop with Terminal Open

Create Virtual Machine

Hardware

You can modify virtual machine's hardware by changing amount of RAM and virtual CPU count. Enabling EFI is also possible.

Base Memory:

4 MB

16384 MB

7850 MB

Processors:

1 CPU

12 CPUs

4

☐ Enable EFI (special OSes only)

Create Virtual Machine

Virtual Hard disk

If you wish you can add a virtual hard disk to the new machine. You can either create a new hard disk file or select an existing one. Alternatively you can create a virtual machine without a virtual hard disk.

☒ Create a Virtual Hard Disk Now

Disk Size:

4.00 MB

2.00 TB

100.00 GB

☐ Pre-allocate Full Size

☐ Use an Existing Virtual Hard Disk File

Macababbad.vdi (Normal, 25.00 GB)

☐ Do Not Add a Virtual Hard Disk

Create Virtual Machine

Summary

The following table summarizes the configuration you have chosen for the new virtual machine. When you are happy with the configuration press Finish to create the virtual machine. Alternatively you can go back and modify the configuration.

Machine Name and OS Type

Machine Name	vmnigonez1
Machine Folder	C:/Users/COLLEGE STUDENT.DESKTOP-LJMOUGQ/VirtualBox VMs/vmrig...
ISO Image	C:/Users/COLLEGE STUDENT.DESKTOP-LJMOUGQ/Documents/ubuntu-2...
Guest OS Type	Ubuntu (64-bit)
Skip Unattended Install	false

Unattended Install

Username	josh
Product Key	false
Hostname/Domain Name	vmnigonez1.myguest.virtualbox.org
Install in Background	false
Install Guest Additions	false

Hardware

Base Memory	79.50

Description

Name: vmnigonez1

Operating System: Ubuntu (64-bit)

Base Memory: 79.50 MB

Processor: 4

Hard Disk: Virtual Disk File: VMDK

Video Memory: 32 MB

Graphics Controller: VBoxSVGA

Remote Display Service: Disabled

Controller: IDE

IDE Secondary Device 0: (Optical Drive) Empty

Controller: SATA

SATA Port 0: vmnigonez1.vdi (Normal, 200.00 GB)

Host Driver: Default

Controller: Intel ACPI

Adapter 1: Intel PRO/1000 MT Desktop (B47)

USB: Controller: OHCI, EHCI

Device Filter: (0.0.0.0)

Shared Folders: None

Description: None
